Our knowledge, your imagination. Powerful software.

DMSBriefcase

Product Description

DMSBriefcase, developed by RBRO Solutions, provides an efficient way for WorkSite users to work offline within their own briefcase as well as collaborate with a team by sharing a common briefcase. This product offers an alternate solution to Autonomy's OffSite module with significantly improved functionality.

Add to DMSBriefcase

Documents, folders, tabs, or WorkSpaces can be added to DMSBriefcase by using a simple right-click and selecting Add.

DMSBriefcase View

Your offline experience using DMSBriefcase mirrors that of your online experience by using folders, tabs, WorkSpaces, and forms as used in WorkSite. New documents created in DMSBriefcase will be added to the corresponding location within WorkSite once synchronized.

Synchronization

A background sync can be run silently at intervals based on your settings. Synchronization can be handled at all the different levels (i.e. a document, folder, tab, Workspace, or the entire briefcase).

Offline Functionality

When working offline, full functionality is available including: open, close, checkin, checkout, create new files, import and export, while maintaining the history of activities.

Sharing DMSBriefcase

Connect to another user's DMSBriefcase or share your own with the team without losing any functionality. You can even transfer a portion of the contents or the entire DMSBriefcase to another user!

Sync via Webservice

DMSBriefcase has the ability to sync one or more document(s) back to WorkSite through a webservice while out of the office.

Features & Benefits

- Work with documents, folders, or WorkSpaces offline
- Share your DMSBriefcase or connect to other users
- Sync any changed documents back to the repository
- Automatically update changed document history file
- Search your briefcase or one you are connected to
- Integrate with Microsoft Office and RBRO's CaseLink
