Our knowledge, your imagination. Powerful software.

MSProjectLink

Product Description

MSProjectLink, developed by RBRO Solutions, is an integrated solution which enables Microsoft's (MS) Project to seamlessly function with the Autonomy iManage WorkSite Document Management System (DMS). MSProjectLink was developed to help companies, with the perpetual need to manage projects, improve business efficiency and better serve their customers.

Business Need

With major projects in production, companies are not able to afford the downtime or costly delays that often occur due to breaches in timelines or poor access to project details. MSProjectLink provides a platform for organizations to easily manage, organize, track, and monitor project details using WorkSite.

MSProjectLink gives end users the ability to automatically select files in multiple servers. Without having to close a file specific to one server in order to open another file located in a different server, the users save time and improve efficiency.

Options Available

Depending on the company's preference, RBRO's MSProjectLink has the ability to custom install as an Active Integration or Passive Integration thus affecting the default Open and Save commands.

Active Mode fully integrates MS Project with WorkSite by always prompting the user with integrated WorkSite paths when using the standard Open, Save As and Insert commands. Local options are also added to the application menus such as: Local Open, Local Save as and Insert->Local Project which will still provide the user with local dialog prompts.

Passive Mode passively integrates MS Project with Worksite by always prompting the user with Local paths when using the standard Open, Save, and Insert commands. Integration to WorkSite is available by selecting WorkSite options such as: Open From WorkSite, Save To Worksite and Insert->Project From WorkSite.

Features & Benefits

MSProjectLink gives users full access to MS Project functionality and the compounded ability of WorkSite. The two systems work seamlessly to provide the following benefits:

- Ability to integrate MSProject and WorkSite
- Real time access to project and support documents
- Manage documentation attached to projects
- Check-in and check-out ability of key items
- Automatic access to projects on multiple servers
