

## RBRO SOLUTIONS

Our knowledge, your imagination. Powerful software.

# MasterEthics

### Product Description

MasterEthics, developed by RBRO Solutions, provides peace of mind to firms dealing with the issues of ethical security.

### The Typical Challenge

With the rise of law firms recruiting senior lawyers and as firms continue to grow, conflicts of interest between professionals increase. Most firms spend valuable resources to identify potential conflicts. Once conflicts are identified, the firm's exposure to lawsuits and non-compliance with government regulations increase.

### The Solution

With MasterEthics, you can easily create security templates for specific clients or matters by user or group. Any new or existing documents created for the client or matter will be instantly secured by MasterEthics. This product goes beyond what most available today do. Ethical security is applied at the time of saving the document as opposed to waiting for a server based process that primarily runs on a timed basis. This means there is no window of opportunity for unauthorized access to secured documents.

Report Generator: Reports are available by Attempted Breaches by User/Group or Client/Matter, as well as Security by and User/Group or Client/Matter.

Immediate Notification: When a user saves a document with security that conflicts with MasterEthics, ME client immediately

notifies the user and discards the offending security entries.

Server Verification: A server process polls continually to verify ethical security on both documents and workspaces to ensure that items imported by processes other than WorkSite are captured.

"Safe" Flexibility: You can provide explicit denials on public matters to ensure that specific groups or individuals do not have access. It is also possible to create restriction lists which indicate who may have access to the document. Professionals still control who and what level of access is given to their documents within the bounds of these lists.

Easy to Use Administration: The ME database can be managed with this simple interface or receive information directly from your RM.

MasterEthics Conflict: A timesheet system can be used to automate inserting a user to MasterEthics. Conflicts between ethical walls can be resolved.

### My EthicalWalls Option

Allows the responsible end user to manage their own ethical walls or delegate another user to make changes as required. They can then view and update user and group access to these matters. The manager or delegate is assigned during matter open (pulled by the accounting system) or added in later by an Administrator.
