

Caseflow

Case Management Redefined

“Caseflow - simplifies Workflow”

“Caseflow will get you home earlier”

Caseflow, via its multi-tiered product mix, builds into a fully featured “Best of Breed” Case and Matter Management system that produces documents, manages workflow and ensures that deadlines are accurately tracked and achieved. Seamlessly integrating with your Email, Practice Management and Document Management systems, Caseflow is scalable, from a 5 person department to several hundred users over multiple locations. Caseflow will mitigate risk and increase your firms productivity, efficiency and accuracy.

“Caseflow keeps you and your clients happy”

Caseflow is available in 3 tiers which ensures that users can use (and pay for) the parts of the system that best suits their area of work.

ShowClause

An Enterprise-wide Clause Library that is simple to deploy, easy to manage, provides economical centralised management of clauses and integrates with your firm’s Document Management System.

ShowClause is an “out the box” inexpensive Clause Library solution requiring little support services to install and operate.

Loading your clauses is done centrally on your network file server or DMS. Once loaded, clauses can be previewed and inserted directly from within Microsoft Word.

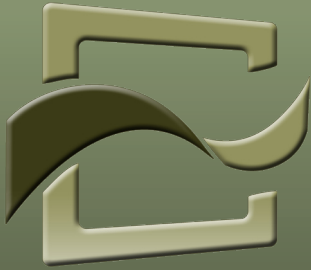

ShowClause establishes a base for Caseflow technology within a law firm that enables expansion into the more highly featured Caseflow products, such as the Enterprise and Outlook Clients.

ShowClause mitigates risk by eliminating “copying and pasting”, a practice within firms that should be firmly discouraged. The full features of ShowClause are outlined within the ShowClause brochure.

Enterprise Client

A mid-level Case Management and document automation solution that operates from MSWord.

The next tier of the Caseflow product range is the Enterprise client which also incorporates ShowClause and all of its features. One of the major features of the Enterprise Client is that it eliminates the need for Templates and Macros, which are common within law firms yet undeniably costly and frustrating to maintain.

Caseflow

Case Management Redefined

“Caseflow - simplifies Workflow”

The Enterprise Client delivers document automation & assembly together with a fully featured SQL database and workflow capabilities from within a single product - why buy multiple products when Caseflow does it all?

Caseflow's Enterprise Client solution is often deployed firm wide, however it can easily be implemented on a department by department basis.

The full features of the Enterprise Client are outlined within the Enterprise brochure.

Outlook Client

The high-end Case Management product whose interface is driven from within MS Outlook.

The fully featured, top tier product from Caseflow is the Outlook Client which also includes all of the features of ShowClause and Enterprise and adds the exceptional functionality directly from Microsoft Outlook.

The Outlook Client adds sophisticated workflow and extensive task management. This solution is ideally suited for deployment to those departments with high end workflow requirements. Because it includes ShowClause and the Enterprise Client, the Outlook Client is a logical choice for those who want to provide seamless access to all information from either a Microsoft Word or Outlook interface.

The full features of the Outlook Client are outlined within the Outlook brochure.

Integration

A suite of integration modules that link Caseflow to your existing systems.

Caseflow also offers a suite of integration modules which, when fully deployed, bring together information from the other applications and systems operating within a Law firm. The result is that the firm's applications now work together in harmony, making the best use of the functions of each of these systems.

Integration with Practice Management and Document Management systems together with Extranet and PDF capabilities round out the fully featured Caseflow product suite.

The full features of the Caseflow Vision Modules are outlined separately within the Modules and Options brochure.

Caseflow will get you home earlier, simplify your workflow and make you and your client happy. And if this was not enough, it also makes for a better bottom line.
