

THE COMPANY

RBRO Solutions is committed to providing its clients with the best of breed technology solutions and the highest level of end-to-end services, integrated software products, and customized snap-in software solutions. We are partnered with global leaders specializing in ECM solutions, providing adoptable and scalable improvements to increase business efficiency and agility.

RBRO team members are chosen for their integrity and belief in the pursuit of excellence along with a solid commitment to client service.

THE OPPORTUNITY

In this role, you can expect to:

- Build your career with a vibrant technology company
- Work in Pickering where you can reduce your commuting time and avoid traffic headaches
- Enjoy a business casual working environment
- Look forward to a competitive salary and medical benefits

THE POSITION

If you are looking for an opportunity to put your superior analytical skills to the test, then look no further. You will be responsible for reviewing products and end-to-end test plans, and providing guidance and assistance in the user acceptance testing phase of the project.

Daily Activities:

- Test a variety of applications
- Revise and verify quality standards
- Review functional specifications for detail and solution completeness
- Develop/design test procedures/plans and assess conformance to functional specifications
- Complete test analysis by creating test scenarios and detailed test conditions
- Participate in the development and/or implementation of defect tracking and reporting tools and systems
- Develop reports based on defect tracking database information
- Liaise with development staff in order to determine the possible resolutions for defects
- Develop and improve strategies to address testing automation and the development of automated test scripts
- Interact with clients from time to time to gain greater understanding of client environments and needs related to RBRO products and quality
- Other duties as required

THE CANDIDATE

The ideal candidate to join our team would have the following:

Qualifications:

- College or university graduate in minimum 3 year related program
- Minimum of 3 years' experience in a Quality Assurance role
- Knowledge of one or more automated testing tools
- Experience in walk-throughs and testing of all phases of the Systems Development Life Cycle

- Knowledge and experience in at least one programming language
- Working knowledge of Windows 95/98/2000/NT testing platforms
- Experience in using bug tracking tools
- Experience in an Object Oriented environment
- Strong knowledge of SQL Server

Skills:

- Experience in designing and implementing test plans, scripts and scenarios
- Experience in software testing and quality assurance
- Superior skills in problem solving, planning, organizing and implementing testing efforts
- Proficient knowledge of structured methodologies for the development, design, implementation and maintenance of applications
- Experience in automated tools and version control systems on one or more platforms
- Goal oriented to achieve project deadlines through self-motivation, persistence and determination
